

Argo National Report of India (2019)

(Submitted by E. Pattabhi Rama Rao, INCOIS, India)

1. The status of mplementation

1.1a Floats deployment

During the year 2019 - 20, 34 floats were deployed in the Indian Ocean taking the total to 493. The new deployment includes 14 Bio-Argo floats (APF-11) with additional sensors like Doxy, FLBB, Chl-a and one float with Nitrate Sensor deployed in Arabian Sea.

1.1b Performance Analysis of Floats deployed

Out of 34 floats deployed during 2019 - 20, 33 are active and providing profiles.

1.2 Technical problems encountered and solved

None

1.3 Status of contributions to Argo data management

- **Data acquired from floats**

India has deployed 493 floats so far (till Apr 06, 2020). Out of these 156 floats are active. All the active floats data are processed and sent to GDAC.

- **Data issued to GTS**

BUFR format messages from these floats are being sent to GTS via RTH, New Delhi RTH.

- **Data issued to GDACs after real-time QC**

All the active floats (156) data are subject to real time quality control and are being sent to GDAC.

- **Web pages**

INCOIS is maintaining Web-GIS based site for Indian Argo Program. It contains entire Indian Ocean floats data along with trajectories. Further details can be obtained at following the link:http://www.incois.gov.in/incois/argo/argo_home.jsp.

Apart from the floats deployed by India, data from floats deployed by other nations in the Indian Ocean are received from the Argo Mirror and made available in the INCOIS website. User can download the data based on his requirement..

Statistics of Indian and Indian Ocean floats are generated and maintained in INCOIS web site. The density maps for aiding people for new deployments are made available on a monthly basis. For full details visit http://www.incois.gov.in/Incois/argo/argostats_index.jsp.

- **Statistics of Argo data utilisation**

Argo data is widely put to use by various Organisations/ Universities/ Departments. Indian Meteorological Department (IMD) is using Argo data for their operational purpose. Scientists, Students and Researchers from INCOIS, NIO, SAC, C-MMACS, NRSA, IITM, NCMRWF, IISc etc are using Argo data in various analysis. Many paper based on Argo data were also published in reputed journals. See the references below. The demand for Bio-Argo data is increasing and the same is being supplied for research interest by various research institutes and universities. These data is also used for validation of Biogeochemical model outputs like ROMS with Fennel module.

INCOIS Argo web page statistics during the year 2019 are as shown below:

Page	Number
Argo Web Page Views	4743
Argo Data Download	2013
Argo Products	37191

Products generated from Argo data

- Value added products obtained from Argo data are continued. Continued to variational analysis method while generating value added products. Many products are generated using Argo temperature and salinity data. The Argo T/S data are first objectively analysed and this gridded output is used in deriving value added products. More on this can be seen in the RDAC functions.
- Version 2.2 of DVD on “Argo data and products for the Indian Ocean” is released to public for use with data corresponding to April 2018 updated. This DVD consists of ~ 3,30,000 profiles and products based on the Argo T/S. A GUI is provided for user to have easy access to the data. DVD product is discontinued and it is being made available via INCOIS and UCSD web sites.
- To cater to many users of INCOIS LAS, it is enhanced in terms of capacity and new products viz., model outputs, new wind products (OSCAT), fluxes are made available. New products as per the request received from the users in future are being made available. For further details visit <http://las.incois.gov.in>.

1.4 Status of Delayed Mode Quality Control process

- INCOIS started generating and uploading D files to GDAC from July 2006, and as of today, profiles belonging to all eligible floats have been subjected to DMQC.
- Advanced Delayed Mode Quality Control s/w developed by CSIRO is being put to use successfully. Using this s/w all the eligible floats are reprocessed to tackle pressure sensor offset problems, salinity hooks, thermal lag corrections, salinity drifts.
- Additionally updated version of DMQC software i.e COW is now being used for performing DMQC.
- Under the data search and archeology data from our own sister concerns is being obtained and put to use in the delayed mode processing.
- About 46 % of the eligible profiles are subjected to DMQC and the delayed mode profiles are uploaded on to GDAC.

1.5 Trajectory files status:

Trajectory files in Ver 3.1 format for all APEX floats are being uploaded to GDAC and trajectories wrt to PROVOR and ARVOR floats is still underway.

2. Present level of and future prospects for national funding for Argo including a summary of the level of human resources devoted to Argo.

Indian Argo Project is fully funded by Ministry of Earth Sciences, (MoES), Govt. of India. Funding is secured for the deployment of 50 Argo floats per year including (3:2 Normal and Bio), Data management activities, Data analysis, etc. for the period 2017-2020. India plans to deploy 50 floats/per (40 tropical Indian Ocean and 10 in the Southern ocean) during the period 2020-2025.

Three Permanent and one temporary scientific/technical personnel are working under Indian Argo project, which include personal for deployment of Argo floats, Data system, Analysis of Data, etc.

3. Summary of deployment plans (level of commitment, areas of float deployment) and other commitments to Argo (data management) for the upcoming year and beyond where possible.

India is committed to deploy floats in the Indian Ocean wherever gap exists. India has committed 50 floats per year during 2017-2020 (40 in the Tropical Indian Ocean and 10 in the Southern ocean). Out of 50 floats, 20 floats will be bio-argo floats. After ascertaining the gap region and cruise plan of MoES research vessels, these floats will be deployed. The existing data management resources will continue until 2025.

4. Summary of national research and operational uses of Argo data as well as contributions to Argo Regional Centers.

Operational: All Argo data are being routinely assimilated in Ocean Model for providing Global ocean analysis. This analysis is being used by Indian MET department for initialization of coupled ocean-atmosphere forecast of the Monsoon. From the year 2011, India is providing seasonal forecast of monsoon using dynamical model wherein Ocean analysis (with assimilation of Argo) is an important contribution. The analysis products are being made available through INCOIS live access server (las.incois.gov.in).

Research: Argo data are being widely used for many applications to understand the Indian Ocean dynamics, cyclone and monsoon system in relation to heat content, thermosteric component of sea level and validation of OGCM by various Indian institutions and university students.

Argo Regional Centre (ARC) - Indian Ocean

(<http://www.incois.gov.in/argo/ARDCenter.js>)

- Acquisition of Argo data from GDAC corresponding to floats other than deployed by India and made them available on INCOIS web site.
- All these data sets are made available to the user through a s/w developed with all GUI facilities. This s/w is made available through FTP at INCOIS and UCSC web sites.
- Delayed Mode Quality Control (Refer 1.4 above)
- Data from the Indian Ocean regions are gridded into 1x1 box for monthly and 10 days and monthly intervals. These gridded data sets are made available through INCOIS Live Access Server (ILAS). Users can view and download data/images in their desired format.
- ERDDAP site was set up for the data and data products derived from Argo floats.
- Additionally SST from TMI, AMSRE and Wind from ASCAT, Chla from MODIS and OCM-2 are also made available on daily and monthly basis.
- Global wind products from OSCAT is also generated and made available on LAS along with TROP flux data sets.
- Data Sets (CTD, XBT, Subsurface Moorings) are being acquired from many principle investigators. These data are being utilized for quality control of Argo profiles.
- Value added products: Two types of products are currently being made available to various user from INCOIS web site. They are:
 - (i) Time series plots corresponding to each float (only for Indian floats).
 - (ii) Spatial plots using the objectively analysed from all the Argo floats data deployed in the Indian Ocean.

These valued added products can be obtained from the following link
http://www.incois.gov.in/Incois/argo/products/argo_frames.html

- Regional Co-ordination for Argo floats deployment plan for Indian Ocean. The float density in Indian Ocean as on 23 Mar, 2020 is shown below.

Active Float Density as on 23-Mar-2020

5. Issues that your country wishes to be considered and resolved by the Argo Steering Team regarding the international operation of Argo. These might include tasks performed by the AIC, the coordination of activities at an international level and the performance of the Argo data system. If you have specific comments, please include them in your national report.

None

6. To continue improving the quality and quantity of CTD cruise data being added to the reference database by Argo PIs, it is requested that you include any CTD station data that was taken at the time of float deployments this year. Additionally, please list CTD data (calibrated with bottle data) taken by your country in the past year that may be added to the reference database. These cruises could be ones designated for Argo calibration purposes only or could be cruises that are open to the public. To help CCHDO track down this data, please list the dates of the cruise and the PI to contact about the data.

Data Sets (CTD, XBT, Subsurface Moorings) are being acquired from many principle investigators. These data are being utilized for quality control of Argo profiles.

7. Argo bibliography

INCOIS is actively involved in utilization of Argo data in various studies pertaining to Indian Ocean. Also INCOIS is encouraging utilization of Argo data by various universities by funding them. Some of the publications resulted from Argo data which includes scientists from INCOIS during the year 2019 are listed below:

1. Baduru, B., B. Paul, D. S. Banerjee, S. Sanikommu, and A. Paul, 2019: Ensemble based regional ocean data assimilation system for the Indian Ocean: Implementation and evaluation. *Oceanmodelling*, **143**, 101470, <https://doi.org/10.1016/j.ocemod.2019.101470>
2. Bhowmick, S. A., N. Agarwal, M. M. Ali, C. M. Kishtawal, and R. Sharma, 2019: Role of ocean heat content in boosting post-monsoon tropical storms over Bay of Bengal during La-Niña events. *Climate Dynamics*, **52**, 7225- 7234, <https://doi.org/10.1007/s00382-016-3428-5>.
3. Chakraborty, K., A. A. Lotliker, S. Majumder, A. Samanta, S. K. Baliarsingh, J. Ghosh, P. P. Madhuri, A. Saravanakumar, N. S. Sarma, B. S. Rao, and P. Shanmugam, 2019: Assessment of model-simulated upper ocean biogeochemical dynamics of the Bay of Bengal. *Journal of Sea Research*, **146**, 63-76, <https://doi.org/10.1016/j.seares.2019.01.001>.
4. Chakraborty, K., N. Kumar, M. S. Girishkumar, G. V. M. Gupta, J. Ghosh, T. V. S. Udaya Bhaskar, and V. P. Thangaprakash, 2019: Assessment of the impact of spatial resolution on ROMS simulated upper-ocean biogeochemistry of the Arabian Sea from an operational perspective. *Journal of Operational Oceanography*, **1**-27, <https://doi.org/10.1080/1755876X.2019.1588697>.
5. Chatterjee, A., B. P. Kumar, S. Prakash, and P. Singh, 2019: Annihilation of the Somali upwelling system during summer monsoon. *Scientific Reports*, **9**, 7598, <https://doi.org/10.1038/s41598-019-44099-1>.
6. Chaudhuri, D., D. Sengupta, E. D'Asaro, R. Venkatesan, and M. Ravichandran, 2019: Response of the Salinity-Stratified Bay of Bengal to Cyclone Phailin. *Journal of Physical Oceanography*, **49**, 1121-1140, <https://doi.org/10.1175/JPO-D-18-0051.1>.
7. Girishkumar, M. S., V. P. Thangaprakash, T. V. S. Udaya Bhaskar, K. Suprit, N. Sureshkumar, S. K. Baliarsingh, J. Jofia, V. Pant, S. Vishnu, G. George, K. R. Abhilash, and S. Shivaprasad, 2019: Quantifying Tropical Cyclone's Effect on the Biogeochemical Processes Using Profiling Float Observations in the Bay of Bengal. *Journal of Geophysical Research: Oceans*, **124**, 1945-1963, <https://doi.org/10.1029/2017JC013629>.
8. Goni, G. J., J. Sprintall, F. Bringas, L. Cheng, M. Cirano, S. Dong, R. Domingues, M. Goes, H. Lopez, R. Morrow, U. Rivero, T. Rossby, R. E. Todd, J. Trinanes, N. Zilberman, M. Baringer, T. Boyer, R. Cowley, C. M. Domingues, K. Hutchinson, M. Kramp, M. M. Mata, F. Reseghetti, C. Sun, U. Bhaskar TVS, and D. Volkov, 2019: More Than 50 Years of Successful Continuous Temperature Section Measurements by the Global Expendable Bathythermograph Network, Its Integrability, Societal Benefits, and Future. *Frontiers in Marine Science*, **6**, <https://doi.org/10.3389/fmars.2019.00452>.
9. Gulakaram, V. S., N. K. Vissa, and P. K. Bhaskaran, 2018: Role of mesoscale eddies on atmospheric convection during summer monsoon season over the Bay of Bengal: A case study. *Journal of Ocean Engineering and Science*, **3**, 343-354, <https://doi.org/10.1016/j.joes.2018.11.002>.
10. Hermes, J. C., Y. Masumoto, L. M. Beal, M. K. Roxy, J. Vialard, M. Andres, H. Annamalai, S. Behera, N. D'Adamo, T. Doi, M. Feng, W. Han, N. Hardman-Mountford, H. Hendon, R. Hood, S. Kido, C. Lee, T. Lee, M. Lengaigne, J. Li, R. Lumpkin, K. N. Navaneeth, B. Milligan, M. J. McPhaden, M. Ravichandran, T. Shinoda, A. Singh, B. Sloyan, P. G. Strutton, A. C. Subramanian, S. Thurston, T. Tozuka, C. C. Ummenhofer, A. S. Unnikrishnan, R. Venkatesan, D. Wang, J. Wiggert, L. Yu, and W. Yu, 2019: A Sustained Ocean Observing System in the Indian Ocean for Climate Related Scientific Knowledge and Societal Needs. *Frontiers in Marine Science*, **6**, <https://doi.org/10.3389/fmars.2019.00355>.
